Flatcar Container Linux: Growing the Cloud Native OS Ecosystem

Project Lightning Talk, KubeCon + CloudNativeCon North America 2026

Jan Bronicki

Flatcar Maintainer, Software Engineer at Microsoft

@John15321 jan-bronicki

Our mission: a boring, secure OS for containers

- **The problem:** everything in our stack is code except the OS
- **Our answer: Operating System as Code**
- **Immutable:** read-only `/usr`, verified at boot, atomic updates with rollback
- **Cloud agnostic:** runs Kubernetes nodes on every major cloud and bare metal
- **Fully open:** free and open-source, community-driven
- **Secure by default:** minimal, signed, tested before every release

Where we are today

- First OS distribution accepted into the CNCF, at **incubating** level
- Trusted in production: **Adobe, Giant Swarm, AT&T, DeepL** and many more
- Used on public clouds, **bare metal** and private clouds alike
- **Stable and reliable:** atomic updates with rollback, every release tested
- **600+ contributors** and a growing community

What we are doing now, and what is next

- CNCF **incubating**, with **graduation on the horizon**
- New **Steering and Technical committees**, reworked **maintainer roles**
- Closer alignment with our **Gentoo** upstream packages
- **Infrastructure overhaul** done, now expanding tests, processes and **platforms**
- **Docs and website** refactored with CNCF technical writers
- Publishing **VEX files** and automating security triage with **AI**
- Scalable **release signing** and a more automated release pipeline
- **You:** good first issues, docs, testing new platforms, sysext images

Find us tomorrow at Project Pavilion, kiosk P-8A
